Product Developer Assessment

Intro

Welcome! This challenge is designed to give us a better idea of how you contribute to the front-end of a web product. We will be evaluating your work based on attention to detail, craftsmanship of the UI, understanding of React, and product mindset.

The Challenge

we've decided to build some internal tools to empower our internal operators. We've found that our operators work more effectively (close more loans, handle more customer service requests, etc) when they share GIF collections with each other.

Therefore, our task is to build an internal app for sharing GIF collections! It's kind of like... Pinterest for GIFs!

Complete the **Basic Requirements**, which make up the MVP we will be showing operators to manage their GIF collections. This challenge's work will allow for operators to search for GIFs and drag them into a collection.

Best of luck!

Basic Requirements

- Enable search against the [Giphy API](#)
- Use their public beta key or your own if you have one
- Efficiently make search requests as the user types in the search input.
- Populate an area on the page with results.
- Demonstrate ability to make full use of the API.
- Allow the user to create collections and add and remove gifs.
- Enable dropping a search result onto a gallery to add it.
- Demonstrate product mindset- in your README discuss why you did what you did. For example, what pros and cons did you take into account? What specific future steps toward the product goals did your work set up for success?
